(Pharmacia) with a modified polylinker; Site 1: ECOR I; Site 2: Not I; NCI CGAP_ED1 is a normalized cDNA library contraining the following tissue(s): Chondrosarcoma cell line CS5. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence that got this library is GCTCAAGGCT.

//clone lib="NCI CGAP FHO"
//note="Torgan: Bone; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR 1; Site 2: Not 1;
NCI_CGAP FHO is a cDNA library containing the following tissue(s): Human Grade 1 Chondrosarcoma Cell Line The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I dagsted with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGAATCCGGC. The cell line was provided by Dr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CGAP_FHO Homo sapiens cDNA clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Email: cgapbe-remail.nib.gov

NCI CGAP CL2 is a normalized cDNA library containing the
following tissue(s): Chondrosarcoma crade II. The library
was constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dr prime containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligomucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
                                                                                            Contact: Robert Strausberg, Ph.D.

Direct Submission

Submitted (102-UIL-2003) Biological Chemistry and Molecular Pharmacology, Harvard Institute of Proteomics, 320 Charles St., Cambridge, MA 02141-2023, USA

This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics.

Each CDS has been cloned without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TW) cloning system between the Sall and HindlII sites of the pDNR-Dual vector. Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus
                                                                                                                                                                                                                                                                                                                                                                                                 1357 GAAGCCTGCCTTAACCAGTCGCTAGATGCCCTTCTGTCCAGGGACTTGATCATGAAAGAG 1416

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful been determined. Primers for synthesising the full length cDNA are useful length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers anable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     125 ProGlylleAlaGlnGlnTrpIleGlnSerLysArgGluAspIleValAsnGlnMetThr 144
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ProCysSerSerAlallelleAsnProLeuSerThrAlaGlyAsnSerGluArgLeuGln 124
                                                                                                                                                                                                                                                                                     AAZ46138-Z46168 encode human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the disgnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                616 GAAGCCTGCCTTAACCAGTCGCTAGATGCCCTTCTCTCCAGGGACTTGATCATGAAAAGAG 1675
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ASPTYRGIULeuValSerThriysProThrArgThrSerLysValArgGlnLeuLeuAsp 184
                                                                                                                                                                                                                                               This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                      New B1 protein regulates cell death and cell survival pathways -
derivatives, DNA and antibodies, also regulate intracellular inflammation
; for treating AIDS, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CTGAACATACCTGTAAATCATGGTCCACAAGAGGAATCATGTGGATCCTCTCAGCTCCAT

                                                                                                                                                                                                                                                 ò
                                                                                  The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, Nck-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present nucleic acid sequence encodes the human cellular kinase RICK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1521 CCTGGTATAGCCCAGCAGTGGATCCAGAGCAAAAGGGAAGACATTGTGAACCAAATGACA 1580
                                                                                                                                                                                                                                                             The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 DNA
                                                                                                                                                                            New antisense oligonucleotide that targets regions of a nucleic acid encoding human receptor interacting protein (RIP)2, for treating diseases associated with RIP2 expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           164

This sequence encodes the human RICK (RIP-like interacting CLARP kinase)

Co fapoptosis, potentiating apoptosis induced by caspase-8 and caspase-10

cduring CD95 signalling. The invention provides methods for identifying

apoptosis signalling pathway inhibitors and activators, and methods and

compositions for screening compounds which will modulate the interactions

of the various compositions identified: ARC, RICK, and the CIDE family of

activators (CIDE-A, CIDE-B and DREF-1). RICK is useful in screening

cativators (COMP-A, CIDE-B and DREF-1). RICK is useful in screening

assays for agents, useful in the diagnosis, prognosis or treatment of

disease associated with excess cell growth and dysregulation of

capoptosis. Complexes containing RICK and CLARP can be used in drug

screening assays to identify inhibitor molecules blocking CD95-mediated

capoptosis. Overspression of ARC in an in vitro cell system can be used

cto identify inhibitors of the enzymatic activity of caspase-8.

Cto identify inhibitors of the enzymatic activity of caspase-8.

Cto identify inhibitors of the enzymatic activity of caspase-8.

Cto identify inhibitors of the enzymatic activity of caspase-8.

Cto identify inhibitors of the enzymatic activity of caspase-8.

Cto identify inhibitors of the enzymatic activity of caspase-8.

Cto identify inhibitors of the propatential set in muscle tissue

and candiac disorders. Therapoutic compositions of CIDEs can be used to

Ctreat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia,

ctreat e.g. cancer, AIDS, neurodegenerative disorders, aplastic annemia,

ctreat e.g. cancer, AIDS, neurodegenerative disorders, aplastic inhibitor

cof an essential step in the proparation or affinity chromatography

media, and for diagnostically measuring RICK levels. A specific inhibitor

of an essential step in the biochemialstry of apoptosis is needed. RICK

interaction with intracellular factors such as CLARP and FADD appears to

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the tissues and calls the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antidathmatic; antirheumatic; antibarthritic; antidiahmatory; antihyorid; antiallergic; antibacterial; antiviral; dermatological; neuroprotective; cardiant; thrombolytic; cagulant; nootropic; vasotropic; antipsoriatic and antianglogenic. The polynuclectides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynuclectides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune calls, to treat disorders of hematopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1203 AAGTTACAGAGTGTTTCAAGTGCCATTCACCTATGTGACAAGAAGAAAATGGAATTATCT 1262
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of

```
contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, muan CARD-4Z or murine CARD-1 (all splice variants of CARD-4).

CC human CARD-4Z or murine CARD-14 (all splice variants of CARD-4)

polypeptide. Also included is an isolated fusion protein, comprising the card polypeptide covalently linked by a peptide bond to a heterologous CC detection assays, e.g. chromosomal mapping, tissue typing and forensic CC biology), predictive medicine (e.g. diagnostic assays, prognostic assays, contioning clinical trials and pharmacogenomics), and in therapeutic and CC prophylactic treatments (in diseases associated with apoptotic cell death cc g. cancers, autoimmune disorders (e.g. systemic lupus erythematosus and immunodeficiency syndrome), neurological diseases (e.g. Alzhahmer's cimmunodeficiency syndrome), neurological diseases (e.g. Alzhahmer's disease, amyotrophic lateral sclerosis, retinitis confisease, spinal muscular atrophy and cerebellar degeneration), confisease, parkinson's disease, amyotrophic lateral sclerosis, retinitis confisease, spinal muscular atrophy and cerebellar degeneration).

CC pigmentosa, spinal muscular atrophy and cerebellar degeneration).

CC syndromes), myocardial infarction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to confidentify other proteins, which bind to or interact with other CARD crocked are CARD-3 proteins and cDNAS. The gene for chaman CARD-4 is located on chromosome 7. The present sequence is a human card con CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1116

This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polynucleotides and proteins and a partial comain, CARD-1 protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase crectuitment domain (CARD) polynucleotides, polypeptides, homologues and recruitment domain (CARD) polynucleotides, polypeptides, homologues and antibodies can be used in screening assays, detection assays, predictive methods may be used to diagnose and treat patients which are suffering from a disorder associated with abnormal level or rate of apoptotic cell death, abnormal activity of the TMF receptor complex, or abnormal activity of the TMF receptor complex, or abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Complex associated with mutations in p53 and hormone—corrupted associated with mutations in p53 and hormone—corrupted associated with mutations in p53 and hormone—corrupted associated with mutations in p53 and hormone—corrupted associated with mutations in p53 and hormone—corrupted associated with mutations in p53 and hormone—corrupted associated with muscular dystrophy, cerebellar degeneration, anaemia, myelodysplastic syndrome, mycoradial infarction, and stroke—corruption interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation and cell survival. The CARD proteins may also be used to for screen drugs or compounds which modulate their activity. The CARD-4 gene can express a campound which modulate their activity. The CARD-4 gene can express a compound which modulate their activity. The CARD-4 gene can express a campound which modulate their activity. The CARD-4 gene can express a compound which modulate their activity. The CARD-4 gene can express a campound which modulation described by a sport transcript that encodes CARD-4, a short transcript that encodes CARD-4 as short transcript that encodes CARD-4 as short transcript that en

The CDNA was isolated following a database search using known CARD sequences. Plasmid pXE17A containing cARD-3 cancer in the protein product of an arracellular protein predicted to be involved in regulating caspase activation. It is useful as a modulating agent in regulating cellular processes include cell growth and cell death. Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the tumour necrosis factor receptor complex, abnormal activity of the tumour necrosis factor receptor or abnormal activity of a caspase involve administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 e.g. a small molecule, antisense nucleic acid, ribozyme or polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to identifying (MI) a compound which modulates a human or murine caspase recruitment domain (CARD)-4L (long form)

Co human or murine caspase recruitment domain (CARD)-4L (long form)

Co polypeptide with a by contacting the polypeptide with a test compound and determining the effect of the test compound on the activity of the compound which modulates the polypeptide. The polypeptide compound which modulates the polypeptide. The method may be adapted for identifying a compound which binds to the LRR (leucine rich repeat) domain of CARD-4. Also included is a method of identifying a candidate compound for modulating LPS, exposing the cell for modulating LPS, exposing the cell for modulating the LRR domain of CARD-4 and cativation, where altered NF-kB activation polypeptide in the presence of the test compound indicates that the test compound is a candidate compound for compound indicates that the test compound is a candidate compound for modulating LPS-mediated activation of NF-kB. Modulators identified by computed to treating a disorder characterised by aberrant CARD-4 creating LPS-mediated activation of NF-kB. Modulators identified by computed to treat or diagnose disorders such as cancer, viral confidence activity of CARD-4L creating, autofimmune disorders eng. systemic lupus erythematosus.

CC infections, autofimmune disorders eng. systemic lupus erythematosus, nuch as multiple sclerosis, Hashimoto's thyroiditis, atopic conditions such as multiple sclerosis, Hashimoto's thyroiditis, atopic conditions such as multiple sclerosis, and lepromatous leprosy, disorders of cell signalling and characters of tissues. The present sequence is the human cDNA encoding characters.

                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-41 and CARD-45. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and hormone-dependent tumnours such as breast cancer, prostate cancer, and ovarian cancer), autoimmune-mediated glomerulonephritis), viral infections erythematosus, immune-mediated glomerulonephritis), viral infections cutch as those caused by herpes viruses, poxythruses, and adenoviruses), neurological diseases (such as Alzeimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of cerebellar degeneration), anaemia and the myelodysplastic syndromes. This polynucleotide sequence represents the cDNA of a human CARD relating to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1329
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1210 CTGAACATACCTGTAAATCATGGTCCACAAGAGGAATCATGTGGATCCTCTCAGCTCCAT 1269

This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator of p75 (a member of the tumour necrosis factor (TNF) family), and is believed to provide the switch for cell survival and cell death decisions mediated by this p75 neutrophin receptor. Accordingly these genes, and the nincreased number of cells surviving and proliferating when expected is inhibited. These include acncer, autoimmune disorders associated with an increased number of cells surviving and proliferating when systemic lupus and immune mediated glomerulonephritis, viral infections such as those caused by the herpesvirus, neurological disorders such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, haematologic diseases including chronic retinitis pigmentes a novel method for determining whether a test compound alters the binding of CARD-3 to p75, which comprises measuring Detecting compounds which alter binding of the caspase recruitment domain (CARD) of CARD-3 polypeptide to the neurotrophin receptor p75 is useful to provide compounds for treating CARD-3 mediated disorders. Disclosure; Fig 2; 40pp; English.

The invention relates to novel isolated Caspase Recruitment Domain (CARD)

polypeptides, CARD-4L and CARD-4S. The CARD proteins of the invention may

be used to treat disorders associated with decreased CARD expression by

supplementing the patient's own production of CARD. Disorders associated

with the expression and activity of CARD include cancers (particularly

collicular lymphomas, carcinomas associated with mutations in p53, and

hormone-dependent tumours such as breast cancer, prostate cancer, and

covarian cancer), autoimmune disorders (such as systemic lupus

crythematosus, immune-mediated glomerulonephritis), viral infections

crythematosus, immune-mediated glomerulonephritis), viral infections

crythematosus at those caused by herpes viruses, poxviruses, and adenoviruses,

cerythematophic lateral sclerosis (ALS) retinitis pigmentosa, spinal

muscular atrophy, and various forms of cerebellar degeneration), anaemia

associated with chronic disease, aplastic anaemia, chronic neutropenia,

and the myelodysplastic syndromes. This polynucleotide sequence

cerpresents the DNA of a human CARD relating to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              997 crgaacaraccrgraaarcarggrccacaagaggaarcargrggarccrcrcrcagcrccar 1056
